
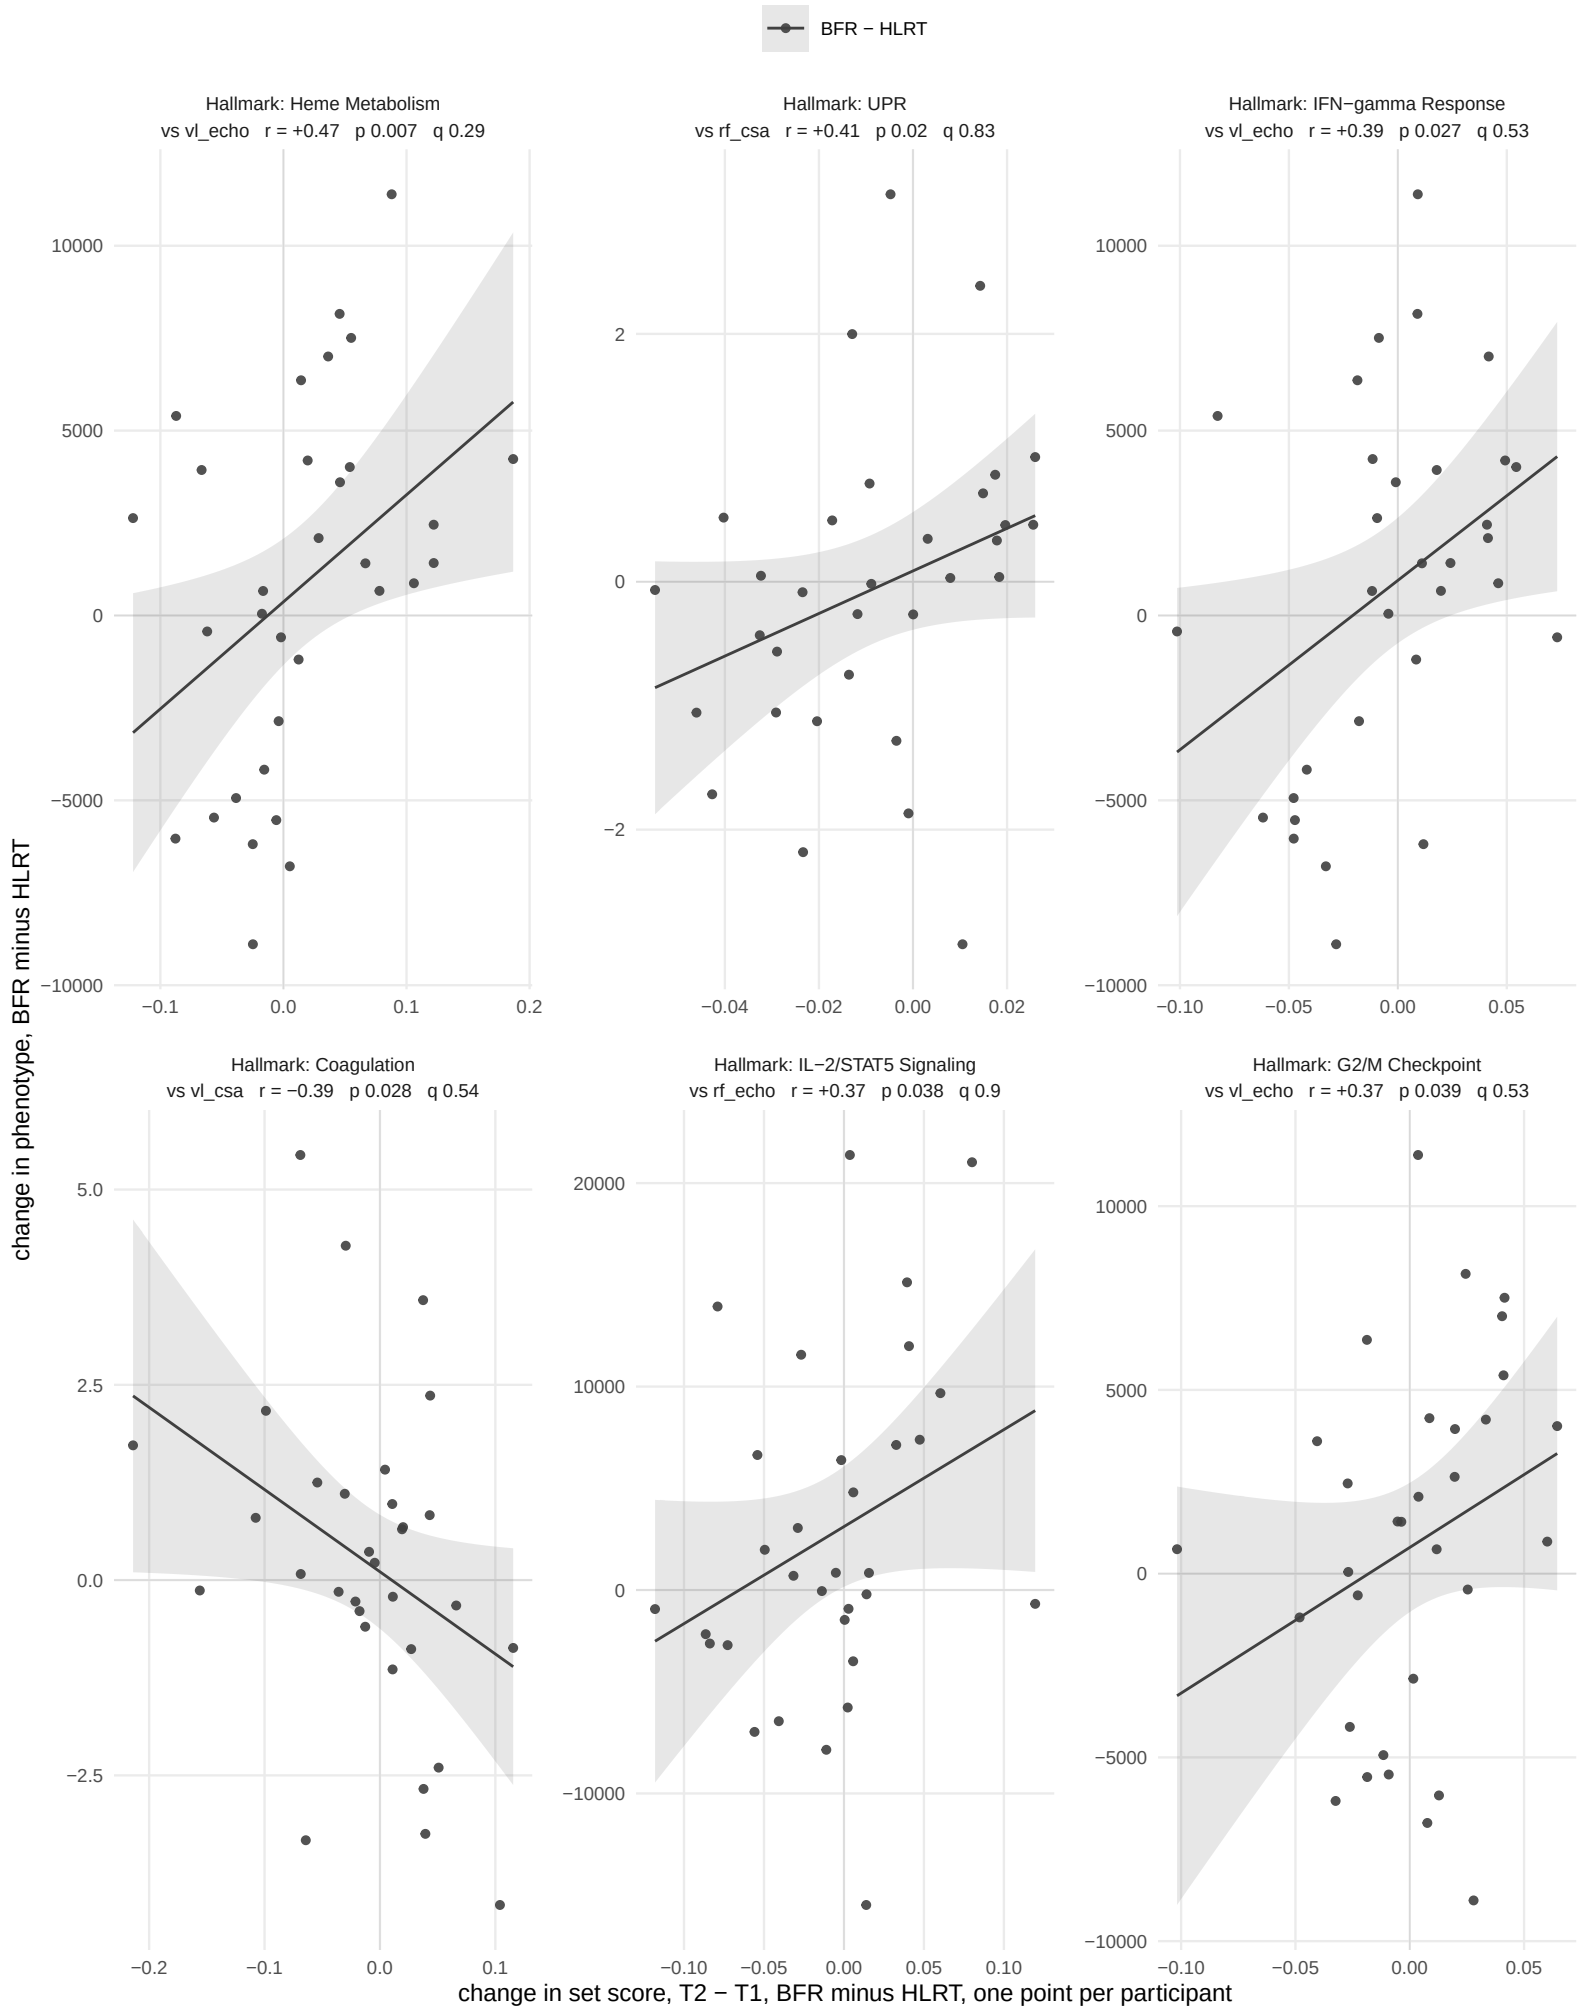
S17 Figure. Training response against phenotype, all legs, Hallmark. All 4 Hallmark set−outcome pairs whose Spearman correlation reaches nominal p in the pooled analysis (65 legs, both arms pooled), smallest p first. Nominal p, uncorrected: chance alone returns 8.2 of the 4 x 41 Hallmark set−outcome pairs. Lines are fitted within each arm; the header r is the pooled correlation and the inset gives it within each arm. q from BH within collection and outcome. Data: set_association and set_by_arm sheets of 06_set_association.xlsx.



S18 Figure. BFR minus HLRT, within participant, Hallmark. All 6 Hallmark set−outcome pairs whose Spearman correlation reaches nominal p in the differential analysis (32 paired participants), smallest p first. Nominal p, uncorrected: chance alone returns 8.2 of the 4 x 41 Hallmark set−outcome pairs. One point per participant: the change in their BFR leg minus the change in their HLRT leg, on both axes. The line is a least−squares fit; the header r is the differential correlation, the one tested. q from BH within collection and outcome. Data: set_association sheet of 06_set_association.xlsx.
