Reactome: core−enrichmen
Citric acid cycle (TCA cycle)
Mitochondrial protein import
Complex I biogenesis
Mitochondrial protein degradation
SCF(Skp2)−mediated degradation of p27/p21
Protein localization
Signaling by the B Cell Receptor (BCR)
Switching of origins to a post−replicative state
Degradation of CRY and PER proteins
Synthesis of DNA
Mitotic G1 phase and G1/S transition
G1/S DNA Damage Checkpoints
Fc epsilon receptor (FCERI) signaling
Mitochondrial translation
AUF1 (hnRNP D0) binds and destabilizes mRNA
Degradation of beta−catenin by the destruction complex
Mitochondrial translation elongation
Aerobic respiration and respiratory electron transport
S Phase
Respiratory electron transport
Nuclear events mediated by NFE2L2
GSK3B−mediated proteasomal degradation of PD−L1(CD274)
CLEC7A (Dectin−1) signaling
ABC transporter disorders
Neddylation
Interleukin−1 signaling
Downstream signaling events of B Cell Receptor (BCR)
Interleukin−1 family signaling
Complex IV assembly
Antigen processing: Ubiquitination & Proteasome degradation
