KEGG: top 20 pathways per contrast
Oxidative phosphorylation
Thermogenesis
Citrate cycle (TCA cycle)
Non−alcoholic fatty liver disease
Diabetic cardiomyopathy
Chemical carcinogenesis − reactive oxygen species
Aminoacyl−tRNA biosynthesis
Carbon metabolism
2−Oxocarboxylic acid metabolism
Ribosome
Retrograde endocannabinoid signaling
Parkinson disease
Huntington disease
Alzheimer disease
Prion disease
Fatty acid metabolism
Motor proteins
Oocyte meiosis
Adrenergic signaling in cardiomyocytes
Calcium signaling pathway
Osteoclast differentiation
Cytoskeleton in muscle cells
Oxytocin signaling pathway
Proteasome
Hypertrophic cardiomyopathy
Dilated cardiomyopathy
Arrhythmogenic right ventricular cardiomyopathy
