Reactome: top 20 pathways per contrast
Aerobic respiration and respiratory electron transport
Respiratory electron transport
Mitochondrial protein degradation
Mitochondrial protein import
Mitochondrial translation elongation
Mitochondrial translation
Complex I biogenesis
Citric acid cycle (TCA cycle)
Protein localization
Fatty acid metabolism
Regulation of T cell activation by CD28 family
Intracellular signaling by second messengers
Co−inhibition by PD−1
Regulation of PD−L1(CD274) expression
Regulation of PD−L1(CD274) Post−translational modification
Fc epsilon receptor (FCERI) signaling
ABC transporter disorders
FCERI mediated NF−kB activation
Interleukin−1 family signaling
Activation of NF−kappaB in B cells
Antigen processing: Ubiquitination & Proteasome degradation
Interleukin−1 signaling
Neddylation
Downstream signaling events of B Cell Receptor (BCR)
G1/S DNA Damage Checkpoints
CLEC7A (Dectin−1) signaling
SCF(Skp2)−mediated degradation of p27/p21
Signaling by the B Cell Receptor (BCR)
