

S16 Figure. Training response against phenotype, all legs, Hallmark. All 4 Hallmark set–outcome pairs whose Spearman correlation reaches nominal p in the pooled analysis (65 legs, both arms pooled), smallest p first. Lines are fitted within each arm; the header r is the pooled correlation and the inset gives it within each arm. q from BH within collection and outcome. Nominal p , uncorrected: chance alone returns 2.1 of the 41 Hallmark sets. Data: set_association and set_by_arm sheets of 05_classify_and_associate_sets.xlsx.

S17 Figure. BFR minus HLRT, within participant, Hallmark. All 6 Hallmark set-outcome pairs whose Spearman correlation reaches nominal p in the differential analysis (32 paired participants), smallest p first. Lines are fitted within each arm; the header r is the differential correlation and the inset gives it within each arm. q from BH within collection and outcome. Nominal p , uncorrected: chance alone returns 2.1 of the 41 Hallmark sets. Data: set_association and set_by_arm sheets of 05_classify_and_associate_sets.xlsx.
