

A

All collections

 $\rho = 0.83 [0.81, 0.84], p < 0.001$ | 98% concordant | 1990 terms, 418 significant

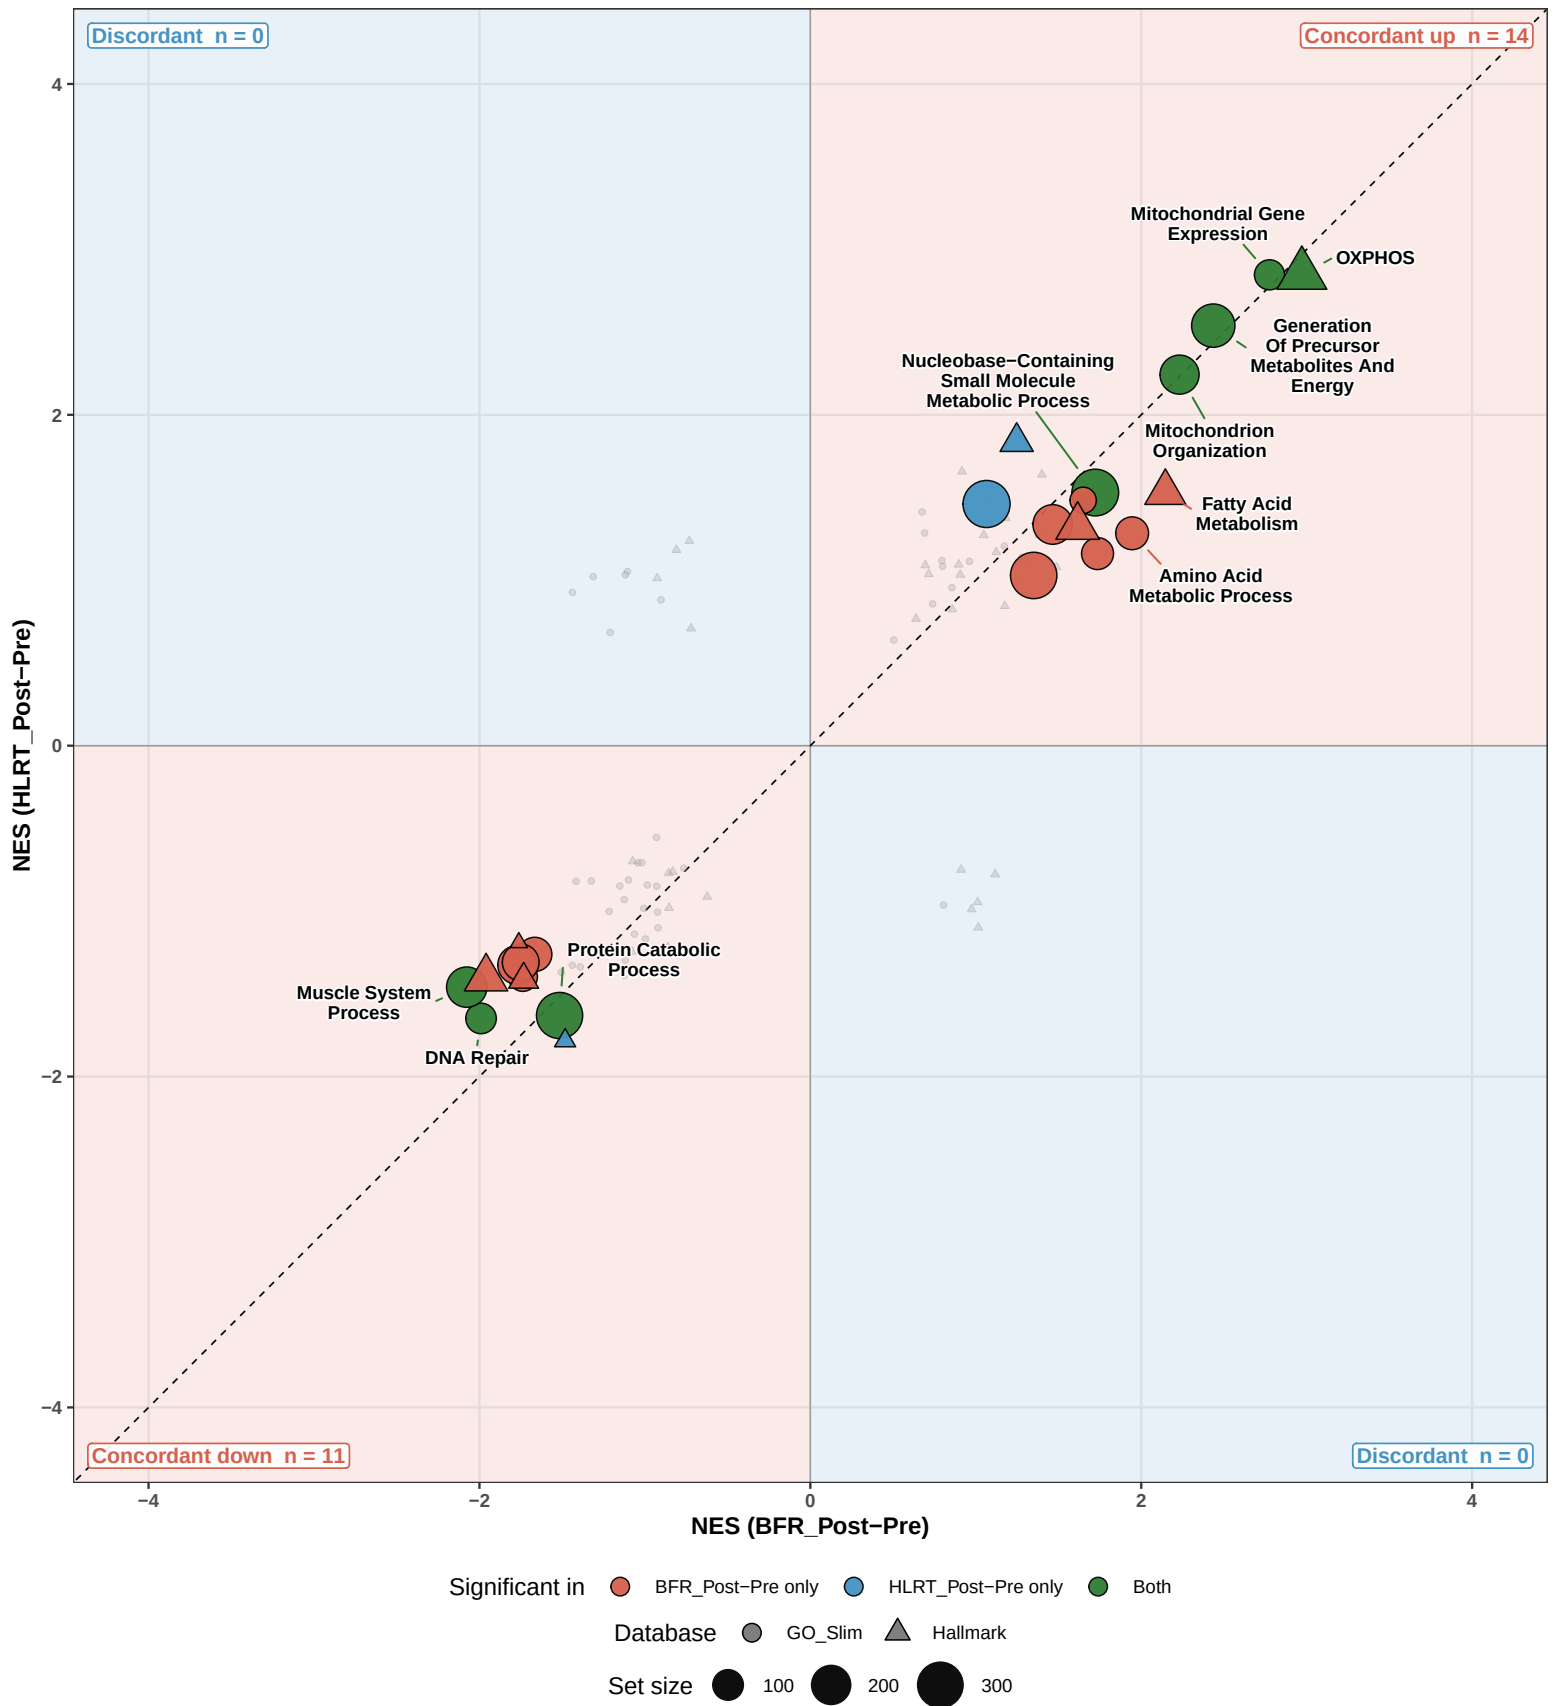

B

Collapse survivors

 $\rho = 0.86 [0.81, 0.90], p < 0.001$ | 98% concordant | 126 terms, 126 significant

S10 Figure. NES concordance, all collections. fgsea NES for each of 1990 sets in BFR_Post-Pre (x) against HLRT_Post-Pre (y). (A) Every set. (B) Sets that survived collapsePathways in either contrast. Points are fgsea sets; grey reach neither threshold, coloured are significant (BH < 0.05 within contrast) in one or both. Shaded quadrants move the same way in both contrasts, with their counts in the corners; dashed line is identity. The subtitle gives Spearman's rho across the plotted sets. Data: nes_scatter sheet of 03_enrich_scatter_fgsea.xlsx.

Hallmark and GO Slim
 $\rho = 0.81$ [0.73, 0.87], $p < 0.001$ | 100% concordant | 100 terms, 25 significant

S11 Figure. NES concordance, Hallmark and GO Slim. All 100 Hallmark and GO Slim sets, whose members do not nest. Points are fgsea sets; grey reach neither threshold, coloured are significant (BH < 0.05 within contrast) in one or both. Shaded quadrants move the same way in both contrasts, with their counts in the corners; dashed line is identity. The subtitle gives Spearman's rho across the plotted sets. Data: nes_scatter sheet of 03_enrich_scatter_fgsea.xlsx.
