

Set score against dispersion

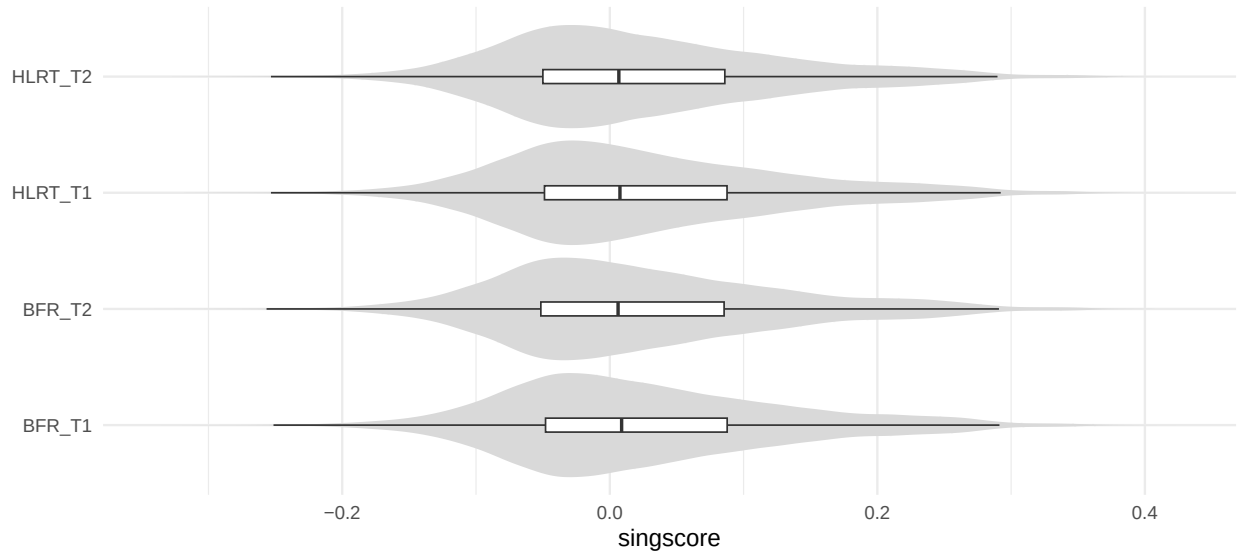

singscore, 1990 sets across 131 samples

One point per set, averaged over samples. Dispersion is the spread of a set's member ranks within a sample: low means members sit together

Score distribution by study group

singscore, 1990 sets pooled

Every set in every sample, pooled within group. Box is the interquartile range. Scores are rank-based and sample-independent. Table: c_d
