

S17 Figure. Training response against phenotype, all legs, GO_Slim. All 7 GO_Slim set–outcome pairs whose Spearman correlation reaches nominal p in the pooled analysis (65 legs, both arms pooled), smallest p first. Lines are fitted within each arm; the header r is the pooled correlation and the inset gives it within each arm. q from BH within collection and outcome. Nominal p , uncorrected: chance alone returns 3.0 of the 59 GO_Slim sets. Data: set_association and set_by_arm sheets of 06_set_association.xlsx.

S18 Figure. BFR minus HLRT, within participant, GO_Slim. All 5 GO_Slim set-outcome pairs whose Spearman correlation reaches nominal p in the differential analysis (32 paired participants), smallest p first. Lines are fitted within each arm; the header r is the differential correlation and the inset gives it within each arm. q from BH within collection and outcome. Nominal p , uncorrected: chance alone returns 3.0 of the 59 GO_Slim sets. Data: set_association and set_by_arm sheets of 06_set_association.xlsx.
