

S23 Figure. Pathways by leg, Reactome. Colour is NES, dot size the share of the pathway in its leading edge. Pathways are the collapse−surviving fgsea sets that 01_run_fgsea_and_fry calls at FDR < 0.05 in either training contrast. Data: set_tests sheet of 01_run_fgsea_and_fry.xlsx.

S24 Figure. Enrichment map, Reactome. Nodes are pathways, pies split by leg, joined when their proteins overlap. Pathways are the collapse−surviving fgsea sets that 01_run_fgsea_and_fry calls at FDR < 0.05 in either training contrast. Data: set_tests sheet of 01_run_fgsea_and_fry.xlsx.

S25 Figure. Pathway tree, Reactome. Pathways clustered by shared proteins, each cluster named by its most frequent words. Pathways are the collapse−surviving fgsea sets that 01_run_fgsea_and_fry calls at FDR < 0.05 in either training contrast. Data: set_tests sheet of 01_run_fgsea_and_fry.xlsx.

S26 Figure. Pathways and their proteins, Reactome. The five strongest pathways and their leading−edge proteins;
ies show which leg each protein leads in. Shared proteins are named in S21 of 07_leading_edge. Pathways are the
collapse−surviving fgsea sets that 01_run_fgsea_and_fry calls at FDR < 0.05 in either training contrast. Data:
set_tests sheet of 01_run_fgsea_and_fry.xlsx.
