S1 Figure. Strongest fgsea sets after collapse, all collections. (A) BFR_Post-Pre. (B) HLRT_Post-Pre. (C) Modality_x_Time_Interaction. (D) BFR_Post-HLRT_Post. Up to ten collapsePathways survivors per contrast, lowest adjusted p first; FDR is BH within contrast. Point size is the number of measured genes in the set; colour is the collection. Contrasts with no survivor are omitted. Data: set_tests sheet of 01_run_fgsea_and_fry.xlsx.

S2 Figure. Strongest fgsea sets after collapse, Hallmark. (A) BFR_Post-Pre. (B) HLRT_Post-Pre. (C) Modality_x_Time_Interaction. (D) BFR_Post-HLRT_Post. Up to ten collapsePathways survivors per contrast, lowest adjusted p first; FDR is BH within contrast. Point size is the number of measured genes in the set; colour is $-\log_{10}$ FDR. Contrasts with no survivor are omitted. Data: set_tests sheet of 01_run_fgsea_and_fry.xlsx.

S6 Figure. Strongest fgsea sets after collapse, GO_Slim. (A) BFR_Post-Pre. (B) HLRT_Post-Pre. (C) Modality_x_Time_Interaction. (D) BFR_Post-HLRT_Post. Up to ten collapsePathways survivors per contrast, lowest adjusted p first; FDR is BH within contrast. Point size is the number of measured genes in the set; colour is $-\log_{10}$ FDR. Contrasts with no survivor are omitted. Data: set_tests sheet of 01_run_fgsea_and_fry.xlsx.

S7 Figure. Significant fgsea sets before and after collapse. Sets at FDR 0.05 per collection and contrast, before and after collapsePathways, which keeps a set only if it stands alone given a stronger set's leading edge. Data: set_tests sheet of 01_run_fgsea_and_fry.xlsx.
