S10 Figure. NES concordance, Hallmark and GO Slim. fgsea NES for the 100 Hallmark and GO Slim sets in BFR_Post−Pre (x) against HLRT_Post−Pre (y). These two collections nest little, so no large branch of the GO:BP hierarchy dominates rho. Grey sets reach neither threshold; coloured ones are significant (BH < 0.05 within contrast) in one or both. Shaded quadrants move the same way in both contrasts, with their counts in the corners; dashed line is identity. The subtitle gives Spearman's rho. Data: nes_scatter sheet of 03_enrich_scatter_fgsea.xlsx.
